MARKED BY OPERATOR

4.9
MARKS PER 100 M OF ROW

WHERE TO LOOK FIRST

Row	Marks	Per 100 m
Row A2	6	8.6
Row A1	3	4.0
Row B1	2	2.6

All 11 marks in the rows are in Rows A2, A1 and B1. 3 more are off the rows (see the map).

WHAT THE CART SAW

#2 · Row A1, 25 m from N end
Marked by operator (gopher)

#13 · Off the rows, 4 m S of Row B1, 75 m from its W end
Marked by operator (gopher)

#5 · Row A2, 18 m from N end
Marked by operator (gopher)

#10 · Row B1, 1–7 m from W end
Marked by operator (gopher)

ABOUT THIS REPORT

Marked by operator Stretches of row (the bands on the map) where the operator marked gopher activity while pushing the cart.

Photos Camera frames we checked by eye; the box shows the mound. 13 of the 14 marks have one.

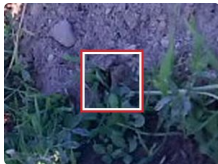

Locations The row the cart was in, and the distance from the row end named in the checklist. Approximate: the cart uses standard GPS, not survey-grade.

Leads, not proof Each mark is a spot to check on the ground, not a confirmed gopher or active burrow.

Grower data Growers own the raw imagery from their farm. We keep a copy to train our detection models, unless the grower asks us to delete it after training.

Every flagged site, sorted by row and distance from the row end given with each distance. Tick what you find on the ground; it tells us which flags hold up, and makes the next report better.
